

Dear Woodturners,

I have a Grizzly 12 X 20 wood lathe physically in very good condition but without any electronics to make it run. It has a 80 Volt, 8 Amp DC motor in place which is original and did run. The electronic speed controls and circuit boards went bad and I removed them completely. This Grizzly Lathe has been discontinued. I do not know if parts are available. It would be better to try to get a separate DC power supply for the machine or if you are handy and creative you could put an outboard V belt pulley on the outboard plate and run that to an AC motor. It also has an adaptor for a Oneway chuck. The 3 speed belt drive is still intact and I have a spare belt. I'm offering the lathe only for \$100.00.

I have the pictured lot of tool holders and drills that fit the lathe (many which were custom made stainless) for \$50.00. I also have a Porter Cable Variable Speed 8 inch grinder with Oneway, Stronghold Bowl Gouge and tool sharpening system for \$190.00.

Also, a 10" dia disk sander attachment for a wood lathe (see below photo), made out of 3/8" thick aluminum, with Maple table, for \$30.00.

You may contact me by phone at (201) 280-5764 or by email at paul.artwrk@gmail.com. I live in Melbourne Beach and expect to be here near the end of April.

Thanks, Paul Sisko
